Hi,

Thanks for the update and see below for answers to your questions:

1. Regarding the Designs chapter, should I provide detailed explanations for all UML diagrams, including use-case diagrams? - Yes, all diagrams should be explained in the chapter.
2. In the Designs chapter, when referencing existing solutions that influenced my design, would you like me to include screenshots of existing application such as Kahoot's quiz, and discuss how it has inspired the overall design? - You can include this in the appendix.
3. Can you provide me a brief summary of what to cover in the final report? - we can discuss this in the meeting. Please also refer to the document I sent you at the start of the project about FYP in computer science.
4. Apart from discussing design rationale, UML diagrams, and wireframes, is there any other aspect of the Designs chapter that I need to focus on? - This chapter should discuss your front-end and back-end design, so nothing else should go here.
5. How many participants are required for the usability test? - around 5-7 would be fine and you can use this paper to back it up "Sauro, Jeff, and James R. Lewis. Quantifying the user experience: Practical statistics for user research. Morgan Kaufmann, 2016."
6. Do you recommend preparing an evaluation report and including it as an appendix for additional insights and analysis of the test results?- not sure I understand the question, we can discuss this in the meeting
7. When discussing about the development tools used, do I need to include them in the Software Project Management chapter, or in the Systems Implementation chapter? - tool and language selection can go in the management chapter.
8. In the Software Project Management chapter, can I include discussions about the project scheduling bar chart, meeting minutes, and the project diary? - yes

Best,

Lilit

Subject: Last Week's Progress for FYP

Dear Dr. Lilit,

Please find below a summary of last weeks progress, and also the questions that I would like to discuss.

- Submitted the Ethics documents for approval and still waiting for feedback from the Ethics team.
- Incorporated your feedback on UI consistency, particularly focusing on high contrast for better usability by visually impaired users.
- Continuously working on resolving the issue with the app icon.
- Made improvements to the dynamic allocation of medication list boxes, allowing for vertical scrolling when the number of medications exceeds a certain limit. However, still exploring solutions for managing large medication lists effectively.
- Currently prioritizing the completion of the System Designs and Implementations chapter, although workload from other coursework modules has been demanding

Questions:

1. Regarding the Designs chapter, should I provide detailed explanations for all UML diagrams, including use-case diagrams?
2. In the Designs chapter, when referencing existing solutions that influenced my design, would you like me to include screenshots of existing application such as Kahoot's quiz, and discuss how it has inspired the overall design?
3. Can you provide me a brief summary of what to cover in the final report?
4. Apart from discussing design rationale, UML diagrams, and wireframes, is there any other aspect of the Designs chapter that I need to focus on?
5. How many participants are required for the usability test?
6. Do you recommend preparing an evaluation report and including it as an appendix for additional insights and analysis of the test results?
7. When discussing about the development tools used, do I need to include them in the Software Project Management chapter, or in the Systems Implementation chapter?
8. In the Software Project Management chapter, can I include discussions about the project scheduling bar chart, meeting minutes, and the project diary?

Thank you for taking your time reading this e-mail and I hope you have a wonderful weekend.

Kind Regards,
Ibrahim Ahmad
